

Peace Lily/White Sails

Scientific Name: *Spathiphyllum sp.*

Features:

1. This is a perennial plant having the ability to grow upto 6ft in height. The plant is used in interior decoration as the leaves are glossy green, while the flowers are milky white.
2. The flower changes its colour to pale green over time but remains viable upto about one month.
3. NASA Clean Air Study claimed that this plant can get rid of harmful chemicals like benzene and formaldehyde from the environment, and hence can purify indoor air.
